

# CONTROL TEMP PACKAGING

## **Superior Insulation**      **Works better!**

Proven technology with thermal characteristics superior to the same thickness of many other materials including EPS (expanded polystyrene) foam.

## **Rugged Design**                      **Better product protection!**

Control Temp Packaging is a strong semi-rigid liner that will not crack or split when dropped.

## **Space Saving**                              **Saves space, assembles easily in seconds!**

Control Temp Packaging takes up less room waiting to be used than foam coolers. Stores flat.

## **Environmentally Friendly**              **Low environmental impact!**

Control Temp Packaging is made mostly of a special type of inert mineral felt encapsulated in a small amount of stable oriented polyester film lining a recyclable corrugated cardboard box.

## **Custom Sizes With No Tooling**              **No up-front investment!**

Control Temp Packaging is flexible in design. With an order of 500 units or above we can develop a box for your application, any size, without development cost to you.

Product of **R.N.C. Industries**, Norcross, GA
